

Weekly report 22  
Kia Kafei 16/4-2021

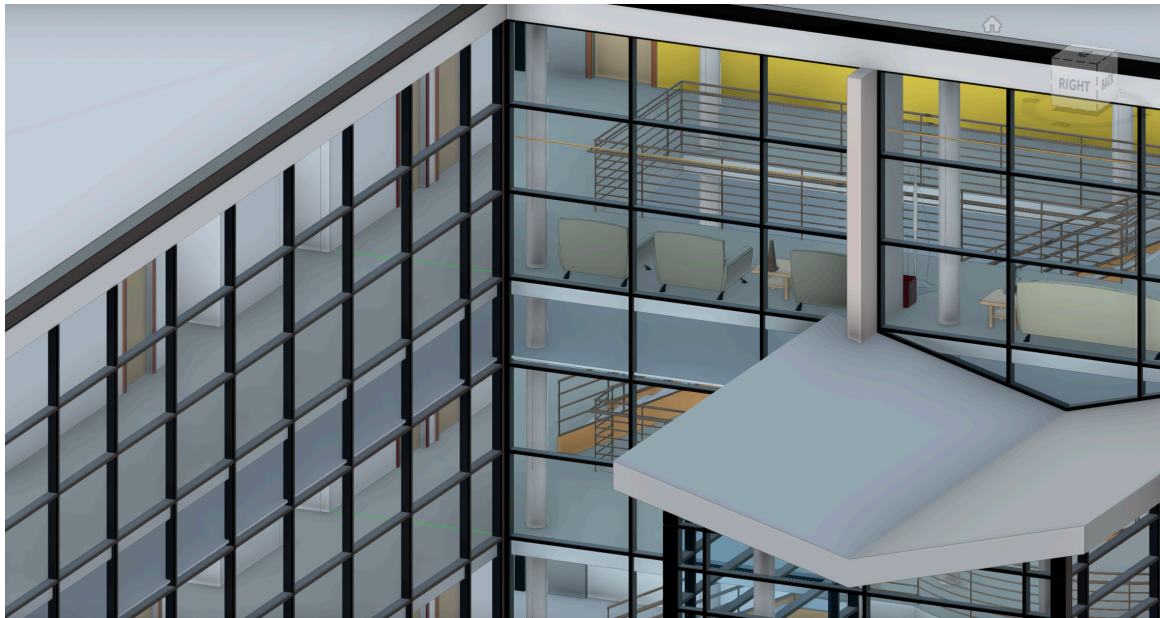

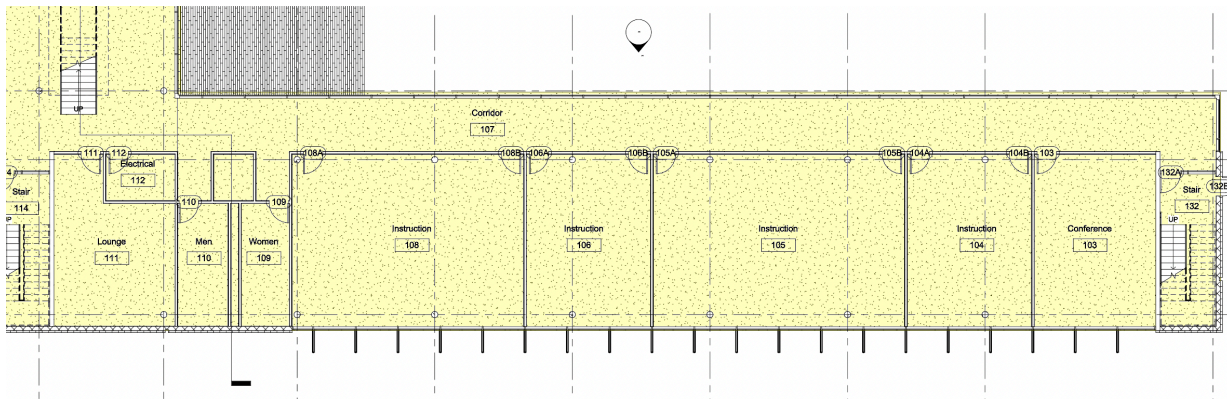

### What did I do this week?

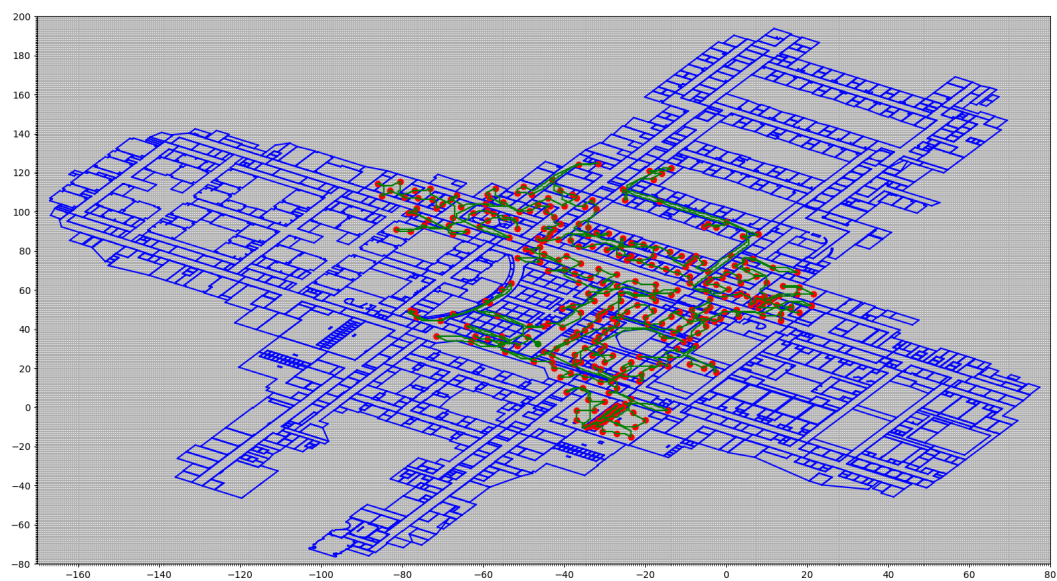

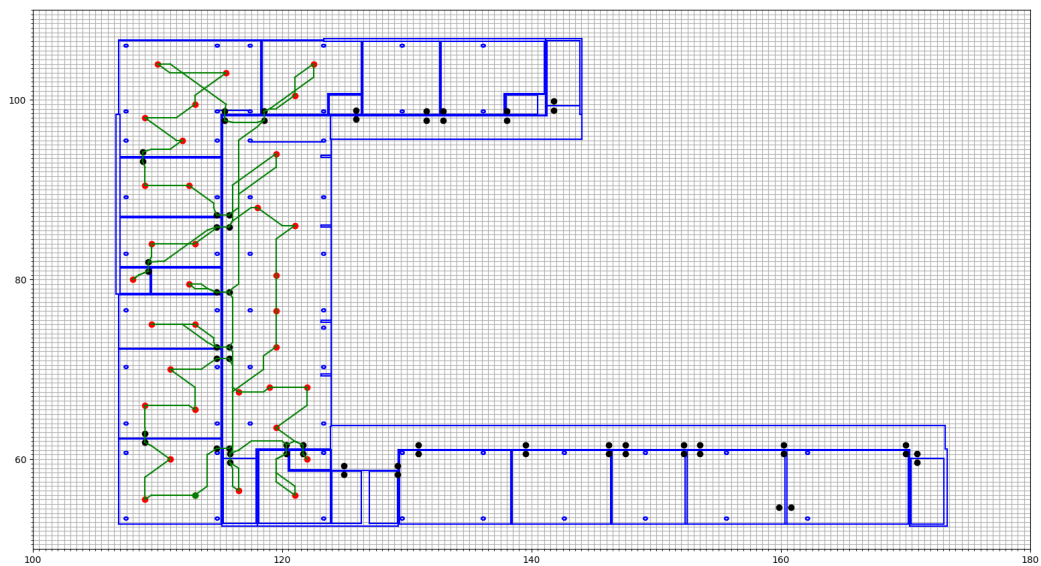

- Wrote most of the analysis and methods sections
- Looked for a solution to the wall problem.

### Challenges.

Found out that I can use the room number to indicate the floor. The problem is that the format of this varies from building to building. Therefore I probably have to stick with elevation levels.

The rooms don't have to be actual rooms with four walls. They can be subparts of bigger rooms.

I can't find any information about which lines indicate walls and which lines are not walls.

### What should I work on next?

- Spend 3 days finding a solution
- Write the result, discussion and conclusion section.
